

ALPHANUMERIC KEYPAD - INFORMATION SHEET

Overview

The alphanumeric keypad incorporates the unique keypad functionality of current standalone interface systems directly into the dispenser at a significant cost savings. The alphanumeric keypad allows fleet members to enter detailed information such as name, license number, customer number, trailer number, mileage, fuel volume, etc. The integrated keypad eliminates the need for a more expensive standalone system resulting in lower initial costs and a cleaner appearance on the fueling island.

Features of the Alphanumeric Keypad Kit

Features of the Alphanumeric Keypad Kit include:

- Ability to enter Alpha and Numeric data via the CRIND.
- Alpha and Numeric keys are located together in the CIM area.
- Available as a factory-installed option or as a field-installed kit.
- Available for Encore Ultra High and Automated Attendant only.
- One for one swap with existing 3"x 5 3/4" keypads.

When to use the Alphanumeric Keypad

The Alphanumeric Keypad was designed for use in the Encore Ultra High for the truck stop segment to enter data that contains both alpha and numeric characters.

Part Numbers for the Alphanumeric Keypad

Part Numbers	Description	
Factory-installed	Alphanumeric Keypad is an optional feature.	See GPL-1500 for information.
