

WHY E85?

Introducing Catlow's E85 Products

Catlow is the leading manufacturer of fuel dispensing equipment that is specifically designed for E85 fuel.

E85 fuel is a clean, environmentally friendly fuel that is a blend of 85% ethanol and 15% unleaded gas. This blend of fuel reduces harmful hydrocarbon and greenhouse gas emissions and is rapidly becoming the alternative fuel in the petroleum industry.

Catlow's E85 compatible products are manufactured using E-nickel plated parts that prevent corrosion; and the fuel is protected against contamination.

The Catlow E85 product line includes all of our standard and vac assist products.
