

GLOBE & ANGLE VALVES

Globe & Angle Valves

Heavy duty and economy globe and angle valves are used in plant or truck piping systems to control gas flow. All valves are designed with a 1/4" F NPT plugged boss in the downstream side of the valve where a hydrostatic relief valve, pressure gauge or vent valve can be installed. All valves have teflon packing, non-rotating seat disc and ductile iron bodies. Economy valves have a threaded bonnet assembly and the heavy duty valves have a flanged bonnet. The Marshall Excelsior valves have all stainless steel internal components making them suitable for LPG and NH₃ applications. The Fisher economy valves are only suitable for LP service.

| NEE # | Type | Size F NPT | Style | Features |
|----------|--------------------|-----------------|-------|------------|
| N301-04 | Fisher | 1/2" | Globe | Heavy Duty |
| N350-04 | Fisher | 1/2" | Globe | Economy |
| N401-04 | Fisher | 1/2" | Angle | Heavy Duty |
