Subject: IMPORTANT REMINDER - VISUAL EXAMINATION

Please take note of this important reminder:

Before conducting an examination, it is mandatory to review and verify the **device NOA, related MAL, device type and sector**, as well as the **serial plate information** during the visual inspection. This is in accordance with Measurement Canada's IPOs & STP, and NEE QPM1-QPM5.

Incorrect recording of device types, NOA, flow rate or other information on ORA has been identified in numerous cases, and **it is the responsibility of ITs to review and correct any errors**.

Kind Regards/Cordialement,

Zana Kamangar
