

Transform your charging data into actionable insights

SKY Insights is an advanced EV charging analytics tool that enables EV charging network owners and operators to access detailed information into charging station performance and usage.

With SKY Insights you:

- Are always aware of your current EV charging network availability status, with details broken down to the charging port level.
- Get alerted about EV charger and port faults, their details and resolution status.
- Have access to the detailed EV chargers' utilization data within your network.
- Can easily configure and download EV charging reports that meet your company's needs.

SKY Insights features at a glance

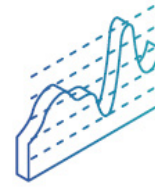

EV Charging Network Status

- Check real-time status of your charging network.
- Get detailed availability status by stations' manufacturer and charging network.

Fault Summary

- Access a comprehensive real-time snapshot of EV chargers' and ports' faults

Network Metrics

- Receive uptime performance of your network for every port and charger.
- View connectivity metrics on the cellular connection at the site.

Alert Management

- Automatically receive proactive operational alerts via email or Slack or both when stations or ports are down and when they are fully repaired and have become operational.
- Get predictive alerts about possible upcoming defects in a station or a port.

Utilization Summary

- Check and download customized EV chargers' hourly and daily utilization data.
- View up-to-date information on the total number of charging sessions, avoided CO2 emissions, saved gallons of gasoline, delivered energy, and earned revenue.

Reports & Notifications

- Schedule, configure, and download customized reports about your charging network and station utilization.
- Get a Low Carbon Fuel Standard (LCFS) report every quarter in a format that meets California Air Resources Board requirements.

Insights provides a real-time look into network status and provides tools to dig deeper and transform charging data into relevant and actionable reports.
